Professional Summary

Software Engineer with 2+ years of hands-on experience designing, developing, and maintaining enterprise-level web applications using Python, Java, JavaScript, Node.js, and React.js. Experienced in building RESTful APIs, designing relational database schemas, optimizing queries, and developing full-stack applications with a focus on scalability, reliability, and maintainability. Proficient in Azure services, Git, CI/CD pipelines, Linux environments, authentication, and API integration, with practical experience deploying cloud-ready applications. Microsoft Azure Fundamentals (AZ-900) certified, with a strong interest in cloud engineering, DevOps, automation, and modern software development practices.

EDUCATION

Bengal Institute of Technology, Kolkata (WB)

August 2019 - June 2023

Bachelor of Technology – Information Technology | CGPA – 8.6

TECHNICAL SKILLS & CERTIFICATIONS

- **Programming:**Python, Java, JavaScript
- **Frontend Development:**React.js, Hooks, State Management, Component Architecture
- **Backend Development:**Node.js, Knex.js, REST API Development
- **Databases:**MySQL, PostgreSQL, MongoDB
- **Cloud Platforms:**Azure Virtual Machines, Azure Storage, Azure Active Directory
- **DevOps & Version Control:**Git, GitHub, CI/CD Pipelines, Linux
- **Web Technologies:**Full-Stack MERN Development, Authentication, API Integration
- **Certifications:**Microsoft Azure Fundamentals (AZ-900)

WORK EXPERIENCE

Software Engineer

Ltimindtree, Hyderabad

Aug 2024 – Present

- Developed and maintained scalable backend services using Node.js, Java, and REST APIs, implementing structured business logic and data validation for enterprise web applications.
- Designed and integrated RESTful APIs to enable reliable communication between frontend and backend systems, supporting application features and data-driven workflows.
- Designed and maintained relational database schemas, optimized SQL queries, and improved data consistency to support efficient application data retrieval and processing.
- Contributed to cloud-based application deployments using Microsoft Azure services, supporting application scalability, availability, and production performance.
- Contributed to CI/CD pipelines and automated deployment workflows using Git-based development practices, improving release consistency and development efficiency.
- Participated in debugging, testing, troubleshooting, and production support activities to identify application issues and deliver reliable software releases.

PROJECTS

Tourism Information Platform (Know India)

- Designed and developed a full-stack tourism information platform using React.js, Node.js, Express.js, and MySQL to organize and present structured information about tourist destinations across India.
- Designed normalized relational database schemas for destinations, categories, images, users, and related tourism data, implementing CRUD workflows to maintain data consistency and efficient information retrieval.
- Developed and optimized RESTful APIs using Node.js and Express.js to support frontend-backend communication, content management, destination discovery, and administrative operations.
- Built an interactive map-based exploration interface using React.js, enabling users to navigate Indian states and discover destinations through structured regional and category-based information.
- Developed a role-based administrative dashboard for centralized management of destinations, categories, images, and user-generated content, reducing dependency on direct database-level content management.
- Implemented authentication, authorization, input validation, security middleware, rate limiting, and application logging to protect API endpoints, control access, and improve application reliability.
- Integrated application and database services with cloud hosting infrastructure and managed database services, supporting deployment, maintenance, scalability, and production availability.
- Performed application debugging, API validation, database query optimization, and production troubleshooting to improve application stability, performance, and overall user experience.
